

Cross Border Protection for Country and State lines

There are elements of equipment as well as software for an effective solution for any CBR policy. The factors to consider include:

- Reason for CBR: immigration control or criminal detection
- Environment: experience has been from deserts to forests
- Operators: Vary from law enforcement, government agencies and the military
- Connectivity: where is to be viewed from and where

Benefits

- Protect borders and checkpoints with recorded images
- Verify individuals by transmitting image to central HQ
- Monitor hazardous areas of sea and land without risk to employee safety
- Extra resources can be allocated due to remote connection to images to assess situation
- Share data with cross border agencies with speed and compatible viewing images

Features

- Video software to manage multiple sites with multiple cameras
- Unlimited number of camera applications
- Wireless systems available for border fence surveillance through wireless repeaters to cover tens or hundreds of kilometres
- View from other locations through the benefits of 3G or Satellite connection
- System integrates with a multitude of cameras (Thermal, Long range night view)
- System integrates with other alarms and alert devices (radar etc)
- Cameras can be housed in marine, heat, cold resistant housings
- Mobile solutions allow for vehicle mounts
- Covert cameras can be located along
- Video analytics: detects humans over wildlife
