

## Petrochemical plant Application

With heightened security procedures due to terrorists threats and health & safety concerns, visual verification is increasingly being utilised alongside traditional and existing security equipment. Plant managers are working in conjunction with security managers and more significantly with IT managers to increase the health & safety of workers. Security managers in turn use this same surveillance to implement security and monitor assets ensure business continuity.

### Benefits

- Central management for multi department access
- Intrinsically safe equipment around a range of cameras
- Fire and smoke detection software generated alerts
- Emap location based CCTV positioning
- Flame resistant, heat resistant, washer wiper and other multiple housings
- Includes sea based oil rigs and marine applications

### Features

- Integrates on to existing networks
- Unlimited number of cameras
- Integrate current camera systems into the Bikal IP system
- Facial detection
- Remote playback and unlimited storage capabilities through the network of NVRs
- Set multi privilege account access to restrict access to different levels of hierachy
- Certified products made in the UK / USA for petrochemical use
